Professional Experience

Complexio Warsaw, PL
Senior Software Engineer 11/2025 – Present

- Owned the Podman-to-Kubernetes (k0s/AKS) migration of a production LLM agent platform across ~9 enterprise environments, with Helm, Flux GitOps and Prometheus/Datadog/PagerDuty observability.
- Built provider-independent LLM inference (Anthropic, Azure AI Foundry, AWS Bedrock, OpenAI); shipped Bedrock in 3 weeks vs. a 2-month plan with Terraform and least-privilege IAM.
- Built a data-discovery service that lets AI agents find and query enterprise data (Snowflake, Oracle, PostgreSQL, Neo4j, Power BI, REST APIs) strictly within each user's own access rights.
- Designed governed scheduled AI reports that run unattended yet never exceed their owner's data access, checking every source before a run and publishing results only on success.
- Designed sandboxed code execution for LLM agents (gVisor on Kubernetes, Azure Container Apps), S3-backed file storage, and brand-aware document generation (DOCX, PPTX, PDF, XLSX).
- Drove a cross-team CI reliability effort: reduced flaky-test failure probability from ~80% to ~2% per run, cut build times from 45s to 6s (~12 CI hours saved daily), and type-checking from up to 15 minutes to 45s.
- Migrated 5 microservices from SQLite/JSON to PostgreSQL (asyncpg) and cut memory use of data-heavy services by 50–70% with a Polars profiler and jemalloc tuning.
- Led a codebase-wide security and maintenance sweep: hardened authorization, file-upload parsing and sandbox limits, and upgraded the stack to current majors (pandas 3, Vite 8, Node 24).
- Release manager and on-call lead for a multi-customer release train, running root-cause analyses up to Microsoft escalations; mentored engineers into owning releases with self-service Claude Code runbooks.

Box Inc. Warsaw, PL
Software Engineer 01/2023 – 10/2025

- Built Python automation with Temporal.io, JIRA, Jenkins, Git and GCP, cutting recurring DevOps tasks by 50%+.
- Modernized legacy internal tools and tuned cross-service pipelines, with up to 10x speedups and lower latency.
- Architected scalable Python/Scala backend services on GCP (Pub/Sub, Dataflow, BigTable, BigQuery).
- Designed a FastAPI-based API Factory that standardized delivery across 10+ areas and reduced time-to-market.
- Migrated infrastructure to Google Kubernetes Engine (GKE), improving observability, uptime, and scalability.

Deloitte Consulting S.A. Warsaw, PL
Senior Specialist 09/2021 – 12/2022

- Led a 4-person team on a Canadian T24 migration project, owning architecture, roadmap, and client delivery.
- Developed automation tools in Python and Java for cutover processes, reducing manual deployment time by 40%.
- Built pipelines for test automation and GDPR-compliant anonymization, cutting data prep time by 60%.
- Integrated Kafka, REST APIs, and IBM MQ to enhance cross-system data reliability and monitoring.
- Delivered migration demos for core banking systems (T24, Vault) that helped secure client engagements.

Consultant 10/2018 – 08/2021

- Architected and maintained an internal ETL platform; drove 100x performance gains under tight deadlines.
- Supported teams in Slovakia and Hungary with transformation logic and QA pipelines for 50M+ record migrations.
- Managed versioning and deployment of Oracle DB schema changes in enterprise banking systems.
- Onboarded 4+ junior developers and contributed to team knowledge sharing and mentorship.

Leadership Experience

WellMate Remote / Poland
Technical Co-Founder (project discontinued) 2023 – 08/2026

- Co-founded a wellness app startup backed by Warsaw School of Economics; led a cross-functional team.
- Designed a GCP backend (App Engine, Cloud SQL, BigQuery) with 99.9%+ uptime and GitHub Actions CI/CD.
- Built Kotlin Multiplatform iOS/Android apps with health integrations and AI nutrition tracking.

Education

Warsaw School of Economics — Warsaw, PL
Executive MBA, MBA for Startups — 12/2022 – 05/2025

Warsaw University of Technology — Warsaw, PL
M.Sc. in Engineering, Automatic Control and Robotics — 03/2020 – 06/2022

Warsaw University of Technology — Warsaw, PL
B.Sc. in Engineering, Automatic Control and Robotics — 09/2015 – 02/2020

Skills & Personal

Programming Languages: Python, Kotlin (incl. Kotlin Multiplatform), Rust, TypeScript, Scala, Java, C, C++
Cloud Platforms: GCP, Azure (AKS, AI Foundry, Container Apps), AWS (Bedrock, IAM), IBM Cloud
Databases: PostgreSQL, Oracle, Snowflake, Neo4j, Memgraph, BigQuery, MySQL, MongoDB, QuestDB
Frameworks & Tools: FastAPI, Flask, asyncpg, Polars, Temporal.io, GitHub Actions, Jenkins, JIRA
Data Pipelines: Apache Kafka, Redpanda, Google Pub/Sub, IBM MQ, Dataflow
LLM & AI: Anthropic Claude, AWS Bedrock, Azure AI Foundry, OpenAI, Gemini, agentic workflows, MCP
Infrastructure: Kubernetes (k0s, AKS, GKE), Helm, Flux/GitOps, Terraform, Docker/Podman, gVisor
Observability & Performance: Datadog, Prometheus, PagerDuty, profiling, jemalloc
Banking Systems: Temenos T24, Vault
Languages: Polish (native), English (fluent, Cambridge CAE), German (beginner)

I consent to the processing of my personal data for the purposes of the recruitment process in accordance with Regulation (EU) 2016/679 of 27 April 2016 (GDPR).
